

TLX: Reindex all images in roll

By [Samuel Harvey](#) on [Tuesday, October 13, 2015 at 12:05am](#)

Reindexes image numbers and filenames based on scan order.

1. [Watch video to launch TLX and get to the DX error point to run this script here:
<https://www.youtube.com/watch?v=iXFWKvWveds>)] *

2. AFTER the "DX ERROR" box pops up, click OK.

THEN run the script by double clicking on .exe or .au3 file with AutoIT installed.*

3. Files will be saved to "C:\Temp".

4. You will have to move each roll to another folder after saving.

Done.

Comments:

No, you cannot change the directory, UNLESS you are using the uncompiled script. Then you may simply edit the SaveDest variable, and save the script before running it.

No, it does not autoincrement folders.

Monaco Miracle has provided a Windows BAT file that will deal with moving files out of C:\TEMP and giving them new date-time-stamped folders to live in.

Download

GitHub project (contains uncompiled scripts):

<https://github.com/sgharvey/pakon-tlx-addons>

Click on "Download ZIP", extract to the desktop of your XP machine.

Install AutoIt v3 by following the link in the README. Go with all defaults.

Execute the script by double-clicking it.

So far 3 users have had issues with this script. I have made changes to the scripts since the issues have been reported. Please use the new version. If you are still having issues, try re-downloading PakonUpdate.zip from the sticky post at the top of the group, and re-installing PSI / TLX. If that does not resolve your issue, please PM me with the following information:

- Dedicated XP box, virtual machine, or dual boot?
- Hardware specifications, host OS version, XP Service Pack number, etc?
- It is EXTREMELY helpful for me to be able to see exactly what is going on, so please make a screencast for me (<https://screencast-o-matic.com/>)

).If you're dual booting / running a dedicated XP machine and are being properly paranoid (no direct connection to any network), then I understand. I'm looking into safe, free, XP compatible screencasting software right now.

Did I make your day, save you time, or stop you from throwing your Pakon / computer out of a window?
